

DHRUVI MISTRY

dhruvim433@gmail.com | [linkedin.com/in/dhruvimistry03](https://www.linkedin.com/in/dhruvimistry03) | github.com/dhruvimistry | Gujarat, India

SKILLS

Languages: TypeScript, Python, JavaScript, SQL, HTML/CSS

Frontend: Next.js 16 (App Router), React 19, Tailwind CSS v4, SWR, React Flow, Redux Toolkit, shadcn/ui, React Hook Form, Zod, Vitest

Backend: FastAPI, Django, Django REST Framework, SQLAlchemy 2.0, Pydantic v2, Alembic, REST API design, OpenAPI, JWT / SimpleJWT

AI / LLM: Anthropic Claude API, OpenAI API, RAG, FAISS vector search, embeddings, tool/function calling, SSE streaming, Model Context Protocol (MCP), prompt engineering, LLM evaluation harnesses

Cloud & Auth: Azure Blob Storage, Cloudflare R2 (S3-compatible), Microsoft Entra ID SSO, Auth.js v5 / NextAuth, OAuth 2.0, Microsoft Graph API, Azure Communication Services, Firebase

Practices: Backend-for-Frontend architecture, object-level authorization, database migrations, unit testing, code review, Git/GitHub, Docker, CI (GitHub Actions), Celery, Sentry

EXPERIENCE

Pragnakalp Techlabs

June 2025 - Present

Junior Software Developer

- Deliver full-stack and AI features for client products across web, LLM and document-processing domains.

AI Document Review Platform · US healthcare-SaaS client

Sept 2025 - Present

- Delivered full-stack features across **PostgreSQL** schemas, **FastAPI/SQLAlchemy** REST APIs, **BFF** routes, and **responsive** Next.js/React/**TypeScript** UIs, with **Vitest** and **pytest** tests and strict **TypeScript** and ESLint checks.
- Redesigned **RAG** and agentic retrieval using LLM tool calling, vector search, and context management, reducing agentic context per search by **73%** and helping lower token usage and latency.
- Built conversational LLM features with **SSE streaming** and conversation history for real-time responses, along with reasoning-model support and per-request token tracking for cost visibility.
- Integrated **Microsoft Entra ID** SSO using **Auth.js** and a stateless **BFF**, centralizing token management and keeping access tokens out of the browser. Added role-based and **object-level authorization** to control access to permitted resources.
- Improved application security by redacting sensitive data from logs, using expiring access links for protected documents, and adding API-key-authenticated endpoints for **machine-to-machine** data ingestion.
- Migrated application data from a legacy database to **PostgreSQL** using **Alembic** and moved documents and generated artifacts to **Cloudflare R2** with **Azure Blob Storage** as a fallback.
- Improved frontend **responsiveness** across desktop, tablet, and mobile through **table virtualization** and **state management** improvements that reduced unnecessary re-renders. Built **PDF and DICOM viewers** with **citation-based navigation** to jump directly to referenced content.

Examiner Hierarchy & Claims Management Platform · US healthcare-SaaS client

Nov 2025

- Built an interactive org-chart workspace that lets supervisors rebalance examiner teams and claim caseloads visually rather than through record-by-record edits, delivered as a **drag-and-drop React Flow** canvas with ELK/Dagre auto-layout, saveable custom layouts, and bulk order transfer across **11 geographies**, using **Next.js 15**, **React 19**, **TypeScript**, and **MUI** over a Django REST + **PostgreSQL** API.
- Secured the platform with **Azure AD (MSAL)** SSO and a four-tier **RBAC** model (SuperAdmin/Admin/Supervisor/Examiner) so supervisors and examiners could only access their assigned geography. Centralized scattered authorization logic into reusable DRF permission classes and React permission hooks/guards, eliminating **200+ lines** of duplicated checks.
- Eliminated N+1 queries with `select_related/prefetch_related` (**200+ queries** → **2**) and replaced a load-everything request with on-demand, cached per-geography hierarchy loading, making initial page load scale independently of dataset size.

Learning Platform · Client engagement · front-end

July 2025

- Built a responsive React + Vite front end using Redux Toolkit for state, Firebase, Chart.js dashboards and Framer Motion transitions.

Wappzo Infotech Pvt. Ltd.

Jan 2025 - Apr 2025

Front-End Developer Intern

- Built an NGO-volunteer matching platform using **React.js**, **TypeScript**, and Bootstrap, with UI designs created in **Figma**.
- Implemented registration, login authentication and event application flows against REST APIs.

PROJECTS

Online Bookstore — Django REST Framework · Next.js 15 · shadcn/ui

- Designed REST APIs and data models in **Django REST Framework** with **SimpleJWT** email/password authentication.
- Built the storefront in **Next.js 15** with **shadcn/ui**, **React Hook Form** and **Zod** validation, protecting routes with Next.js middleware.
- Implemented the full cart and checkout flow across both tiers - cart models, order placement, and inventory quantity handling.

EDUCATION

B.E., Information Technology — Sardar Vallabhbhai Patel Institute of Technology, Vasad

2021–2025 · CGPA 8.65

CERTIFICATIONS

Anthropic: AI Fluency / Prompt Engineering & Claude API coursework

Sept 2026
